

# Mobile Interface to Enterprise Database (MINED)

**MINED** provides remote, distributed and interactive access to Institute / company data residing on an enterprise database via an ordinary mobile phone. This database can be accessed using GPRS/CDMA/3G wireless connection available on mobile phones. It allows users with pre-defined access controls to not only create but view and edit data on the enterprise database.

## Milestones Achieved/Current

### Status

- Used the same successfully for NREGA Impact Appraisal Survey Project. The Survey was conducted from April'09 – May'09
- Release to E-JEEVIKA (HR company working for employment of rural people) for resume collection is getting ready
- Released an initial version of J2ME mobile application for use in small retail firms for remote sales ordering & order consolidation.
